HIDREX

GREAT POWER  GREAT OUTCOMES

Hidrex USA, LLC is a US based and American owned venture that has partnered with Hidrex GmbH (Germany), the manufacturer of Hidrex TWI devices, which has been helping relieve the symptoms of hyperhidrosis sufferers in Europe for over 35 years. Hidrex USA was formed in January 2015 to introduce select Hidrex brand products to North, Central and South America, and to better service and support this market for this growing and highly beneficial product line.

DO YOU SUFFER FROM EXCESSIVE SWEATING?

If so, you may have a medical condition called hyperhidrosis.

The great news is that there are treatment options available for your symptoms.

STOP SWEATING!

TWI Treatment For Hyperhidrosis

Presented by **HIDREX**

WHAT IS HYPERHIDROSIS?

According to the US National Library of Medicine, "hyperhidrosis is a medical condition in which a person sweats excessively and unpredictably. People with hyperhidrosis may sweat even when the temperature is cool or when they are at rest."

Hyperhidrosis can significantly disrupt a person's ability to do what many of us take for granted. It can be physically, emotionally and psychologically challenging to say the very least. It is estimated that hyperhidrosis affects 2-3% of the general population.

HYPERHIDROSIS can affect you in many areas

TAP WATER IONTOPHORESIS

While there are many treatment methods available for hyperhidrosis, tap water iontophoresis (TWI) is widely considered one of the most effective, safest, proven and cost-efficient treatment options available. TWI has been used effectively to manage hyperhidrosis for over 40 years in Europe. Hyperhidrosis itself is just now being recognized and diagnosed as a medical condition in the US.

Other treatment methods include surgery, Botox, and high-strength anti-perspirants. These options have varying degrees of effectiveness, significant initial or ongoing costs, and/or high risk.

TWI is drug-free, safe and proven. There is only a moderate initial cost for the device with very little maintenance or ongoing costs. Hidrex TWI devices have a proven 98% effectiveness rate for hyperhidrosis sufferers. Many insurance companies reimburse for a portion of the cost of the device.

THE **HIDREX** WAY

TWI treatment is similar to a work-out or physical therapy session in that you get results based on how disciplined you are in doing your exercises or sessions. A TWI treatment

consists of introducing the treatment area (hands, feet, underarms, face, etc.) to water that has a mild and safe electrical current going through it for short amounts of time.

First you go through an initial treatment phase (about ten 15 minute sessions no less than one day apart), then a simple and easy maintenance phase (1-2 sessions/week) is typically all that is needed to keep the symptoms away. The effects ARE reversible; if the treatment is stopped, the symptoms can return over time.
